

Plate exchanger Integrity test

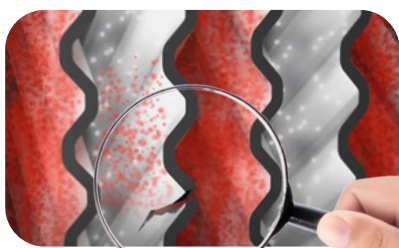

Maintenance and inspection

When does your plate heat exchanger need maintenance or replacement?

The integrity test equipment sends gas through the exchanger. Is there a microcrack? Then the leakage is detected by the test equipment.

The microcracks are so minimal that they allow gas to pass through and liquid, such as dairy or beer, do not. In just 1 hour, you will know if maintenance is needed and when plates need to be replaced.

Advantages integrity test

- ✓ Leaks identified and located before they occur
- ✓ No risk of false positives
- ✓ Plate exchanger stays in each other and inline
- ✓ Brand independent
- ✓ Fast: often an answer in 1 hour!

Our service

- ✓ Fast response time
- ✓ Troubleshooting
- ✓ Process improvement
- ✓ Many parts in stock
- ✓ Experienced and competent
